

This appendix presents the results of the base multinomial logit (MNL) specifications used in the preliminary analysis of the discrete choice experiment assessing young people's preferences for type of family planning service provider.

Base MNL Model			
Choice	Coefficient		SE ^a
<i>Government</i>			
Distance	-0.017	**	0.007
FP commodities	0.766	***	0.057
Service provider attitude	0.659	***	0.055
Wait time	0.002	*	0.001
<i>Private</i>			
ASC ^b	-0.425		0.347
Distance	-0.012	*	0.007
FP commodities	0.789	***	0.092
Service provider attitude	0.512	***	0.080
Wait time	-0.002		0.002
Price	-0.003	**	0.001
<i>Outreach</i>			
ASC	1.312	***	0.287
Frequency	-0.109		0.087
Wait time	-0.003		0.003
Price	-0.002	***	0.000
<i>CBDA</i>			
ASC	0.063		0.240
FP commodities	1.011	***	0.059
Service provider attitude	0.777	***	0.057
Price	-0.004	***	0.001
<i>None ASC</i>	-1.754	***	0.240
<i>Model Fit Statistics</i>			
Number of individuals	540		
Number of observations	2700		
Log Likelihood Function	-3048.71		
AIC	6135.4		

^a SE = Standard Error, ^b ASC = Alternative Specific Constant
