**Figure S5. VL Sero K-SeT results for relapsed VL were matched by western blots detecting IgG1 anti *L. donovani*.** (A) Representative RDT images (samples 1-9) from a total of 25 Indian relapse samples and the single Sudanese relapse (sample 10) that were tested by VL Sero K-SeT. (B) Western blots of the same samples. C: control line, T: test line, M: Molecular weight marker with kDa given. Sudanese blot number 10 was part of a separate photograph, matched for position using its corresponding molecular marker lane.
